SYSTEM

Stone Feel Pool

Your concrete pool

A system created to feel.

Concrete pools are an excellent option for building durable and fully customized swimming pools.

One of the main advantages of concrete pools is their flexibility to adapt to different shapes and sizes, allowing you to design a personalized pool that fits both your preferences and the available space on your property, with a modern and minimalist appearance.

Thanks to its versatility, the Stone Feel Pool system offers different finishes, whether coarse or fine, or with the possibility of including aggregates (such as different types of quartz or even glass) to achieve a stone-like appearance.

These finishes not only enhance the aesthetics of the pool but also help seal the concrete and make maintenance easier. This type of pool is known for

its long-term durability. With proper care, a concrete pool can last for decades.

The system includes a waterproofing base that is essential for proper connection and performance, preventing water leakage. Due to the system's composition and the amount of cement used, it also helps retain heat and, under direct sunlight, contributes to maintaining a more stable water temperature.

Regular maintenance is necessary to preserve both the appearance and functionality of the pool. This includes balancing the water chemistry and cleaning the coating.

It is important to work with experienced professionals in the construction of concrete pools to ensure a high-quality and long-lasting result, always in compliance with current swimming pool regulations.

STONE FEEL POOL

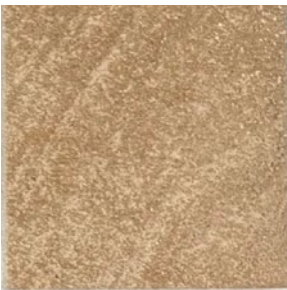

STONE POOL FINE

Stone Pool Fine is a decorative finish suitable for both indoor and outdoor applications. It has a fine aggregate consistency and is a modern, durable coating used to create continuous, long-lasting, and elegant-looking surfaces in a wide variety of spaces, offering a broad range of finishes and colors.

STONE POOL COARSE

Stone Pool Coarse is a decorative finish for both indoor and outdoor use. It has a medium-grain consistency with a rougher, more textured appearance. It is applied in thicker layers, allowing the creation of three-dimensional effects and giving surfaces a more rustic and robust look. This type of coating offers numerous advantages, such as resistance to wear, impact, and moisture. In addition, it is easy to clean and maintain, while offering a wide range of finishes and colors.

STONE POOL AGGREGATES

Stone Pool Aggregates is a polished and smooth decorative finish for both indoor and outdoor use. It consists of a layer made from a mixture of materials, including a base combined with aggregates such as stones, sands, quartz, ceramic fragments, recycled glass, or other similar elements. It offers a versatile and durable alternative to enhance and protect surfaces, adapting to different architectural styles and functional requirements.
