DECOSOL SYSTEM

In November 2023, the application of the DECOSOL system was carried out for the **renewal of a printed pavement**.

Over time, the printed flooring of this renowned franchise brand **suffered discoloration, stains** that were difficult to clean, and the suffering of **tires spinning**, cleaning machines passing by, and various transports.

The choice of **high-quality materials** and the contribution of **Pavistamp** have been key in the renovation of a frequently used and low-maintenance space and thanks to the application of **our solutions**, its initial appearance has been recovered.

Location: 43500, Tortosa (Tarragona)- Spain

Printed Pavement in fast food pickup service area.

Decosol is a complete **breathable cement paint** system to rehabilitate any type of pavement or porous surface.

It can be applied very easily by individuals, companies specialized in the sector, City Council brigades or professionals on busy industrial surfaces, private properties, swimming pools, urbanizations or cities.

Its resistance to aging ensures long durability.

Drive-In in downtown of fast food

DECOSOL

Our cement paint has been designed to **resist wear and abrasion**, making it ideal for pavements with high traffic of people and vehicles.

It has **exceptional adhesion** to the existing substrate and guarantees a long-lasting application. Decosol is formulated and designed to **resist stains**, making it easy to clean and maintain.

Advantages

For use in multiple applications, such as the **renovation of pavements** as a paint, on absorbent or porous surfaces.

It has great resistance to aging and excellent abrasion behavior.

System Composition

DECOSOL

For a long duration, its **preparation** must be adequate and crucial. Cleaning and degreasing the surface initially was essential before applying the paint.

Available in a wide range of colors to suit all aesthetic preferences.

Delivery of the Work 2023

DECOSOL

In this project, **Decosol from Pavistamp** has been the material chosen to create a surface that not only enhances the old pavement but also gives the whole a renewed aesthetic appearance, guaranteeing **resistance and durability**.

Fabrication process of the structures and coatings

Surface Preparation: Proper preparation was crucial. Cleaning and degreasing must be thorough before applying the paint.

Repair of cracks and gaps: Some superficial cracks and gaps in the pavement were repaired with suitable compounds before applying the paint.

Primer: In this case, a primer was required before application to improve adhesion. Please check the instructions or consult us before proceeding or consult our technical sheets.

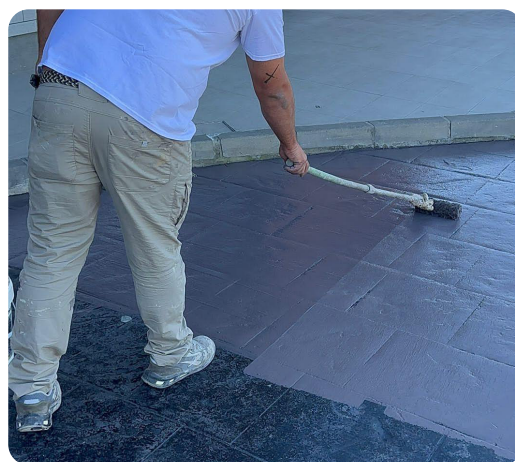

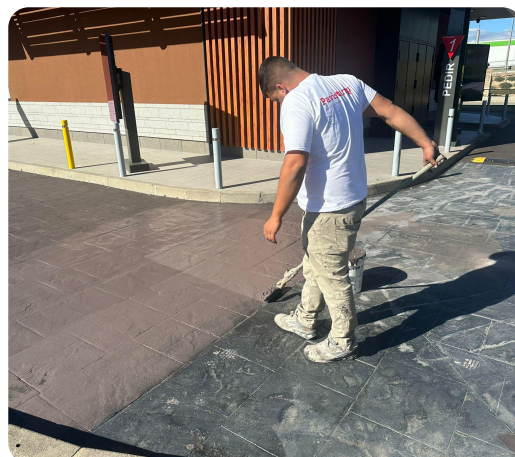

Mixing: Correct mixing of this paint ensures and guarantees uniform application.

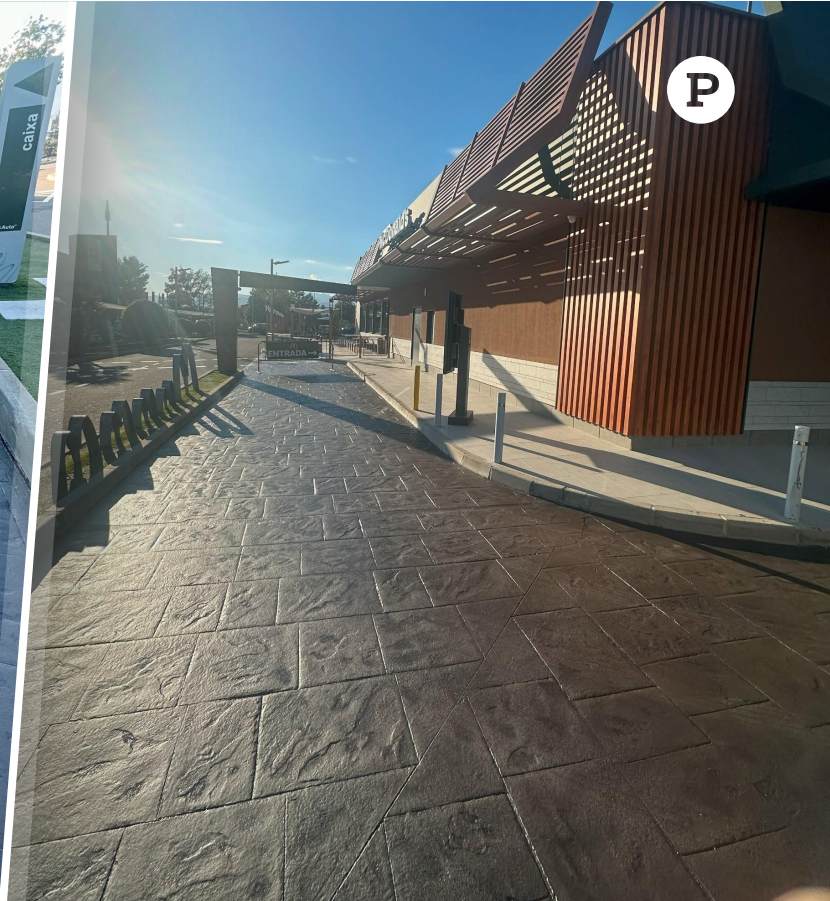

Application: The use of high quality paint roller and specialization of the recommended applicator ensures uniform coverage. Follow our recommended application pattern using our application and prescription manuals.

Drying: The specific drying times of the paint must be respected so that Decosol dries completely according to our instructions. Before walking, traveling or allowing vehicles to pass, It must be ensured that drying is optimal.

Sealing: Depending on the layers and finish required, reinforcing layers may need to be applied to improve durability and strength.

Always remember to follow specific instructions, as recommendations may vary depending on the application. Good luck with your renovation project!

Product Application

CON Continuous Technology

For the realization and execution of this project, we had the collaboration of the company **CON Technology Continuous**, professionals with extensive experience in the application of this system and **small, medium and large-scale projects** mainly in sand and microcement pools, resins, polished and decorative concrete.

The contribution to this work and a **meticulous procedure and use of tools** was essential for the successful achievement of the project.

Undoubtedly, their participation and knowledge were crucial so that the pavement, over time, remains in optimal condition and fulfills its function.
